

BLAKE TAYLOR

AI Product Builder · Technical Founder · Operator

Chicago, IL · koinophobia999@gmail.com · linkedin.com/in/bt77 · github.com/koinophobia-labs · koinophobia.dev

SUMMARY

Founder of Koinophobia Labs, a one-person AI product studio in Chicago. Ships end to end: native iOS and Next.js web products, LLM-backed features, and automation systems — designed, built, tested, deployed, and verified in production. Background in high-tempo sports and gaming operations, with an operator's eye for where real systems break.

Open to conversations around product, AI tools, operations, support, startups, and technical customer-facing work.

EXPERIENCE

Founder — Koinophobia Labs

2026 – Present

- Built and shipped Trendi, a native SwiftUI iOS creator app with an LLM-backed coaching pipeline, distributed through TestFlight.
- Built and launched live web products: You Know Ball (sports-debate MVP) and Career Forge (local-first career and résumé tool).
- Designed and runs the studio's production platform on Next.js: CRM, website-audit, intake, and proposal systems behind authenticated server APIs, with database migrations wired into the deploy pipeline.
- Operates a productized website revenue-leak audit offer for local businesses, from crawling and scoring through client-ready reporting.
- Owns the full product lifecycle solo: architecture, implementation, adversarial QA, deployment (Vercel, App Store Connect), production verification, and documentation.

BACKGROUND

Before founding Koinophobia Labs: sports and gaming operations — high-tempo, high-pressure, customer-facing environments including sportsbook operations, plus community, content, and product work. That operating experience is the foundation of the studio's approach: build from real problems, and test where systems actually break.

SELECTED SHIPPED WORK

Trendi koinophobia.dev/trendi

Creator consistency app that turns a rough thought into clear words to say on camera. Native SwiftUI iOS product with a two-pipeline LLM coaching architecture.

Career Forge career-forge-lite.vercel.app

Local-first command center for positioning, résumés, applications, outreach, and interview prep. Live web tool; nothing uploaded, everything on-device.

You Know Ball you-know-ball-orpin.vercel.app

Sports-debate game where users defend takes and get judged. Live web MVP and product-proof asset.

Koinophobia Labs platform koinophobialabs.com

The studio's production site and business system: Next.js server app with CRM, audits, intake, and proposal generation running live.

SKILLS

Product & AI: LLM integration and agent workflow design, AI-assisted product development, product operations

Engineering: Next.js / React / TypeScript, SwiftUI / iOS, REST API integration, PostgreSQL, Vercel deployment and production verification

Operations: customer experience, QA and adversarial testing, documentation, community and content operations
